Summary

Frontend Engineer with **3.5 years of hands-on experience** crafting **scalable, high-performance web interfaces** using modern JavaScript and component-based systems. Strong expertise in **UI engineering, frontend optimization techniques, and design system implementation**. Proven ability to deliver **intuitive user experiences**, enhance **web performance metrics**, and develop **maintainable frontend solutions** for production-scale applications.

Skills

Core	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend	React, Redux, React Router DOM, Tailwind CSS, LESS, Accessibility (WCAG), i18n
Performance	Code Splitting, Lazy Loading, Memoization, Debouncing, Throttling, Web Vitals
Testing	Jest, React Testing Library, Unit Testing
Tooling	Git, Webpack, Browser DevTools, Figma
Backend / Integration	REST APIs, PHP

Experience

Software Engineer (Frontend), Webkul – Onsite Jan 2023 – Present

- Spearheaded development of **frontend features and UI modules**, prioritizing **performance, accessibility, and cross-browser stability**.
- Architected **scalable component structures** and **reusable UI patterns** to accelerate feature delivery and reduce duplication.
- Enhanced **web application performance** through **code splitting, lazy loading, render optimization**, and efficient event handling.
- Delivered **interactive, content-driven interfaces**, including configurable **page builders** and dynamic UI workflows.
- Integrated **RESTful APIs** to support **real-time data rendering** and smooth frontend-backend coordination.
- Strengthened code quality through **frontend testing, peer code reviews**, and consistent UI standards.

Projects

React Page Builder – EGSMa.io

- Developed a **modular React.js drag-and-drop page builder** with **real-time previews** and **responsive layouts** for rapid page assembly.
- Implemented a **dynamic content management flow** via **RESTful APIs (PHP backend)**, reducing **page creation effort by 80%**.
- Accelerated **runtime performance** using **code splitting, lazy loading, and component memoization**, resulting in **30% faster load times**.

Unopim Website Enhancements – unopim.com

- Modernized the interface with a **dark theme**, refined **micro-interactions**, and improved **visual hierarchy**, increasing **user engagement by 25%**.
- Enabled **localized, multi-language UI delivery** through **i18n integration** and a configurable **page builder**, cutting **content rollout time by 40%**.
- Improved **rendering efficiency and interaction performance** using **debouncing and throttling**, boosting **overall web performance by 30%**.

Marketing Site + Builder – Bagisto

- Delivered a **conversion-optimized marketing platform** achieving **95%+ web performance scores**, with strong emphasis on **SEO, accessibility, and fast paint times**.
- Created a **React-driven content builder** with **i18n capabilities**, enabling teams to manage **scalable, multilingual user experiences**.
- Defined and enforced a **design system** with reusable components and **responsive styling**, improving **visual consistency** and development speed.

Education

Bachelor of Technology in Computer Engineering
Maharishi Markandeshwar University, Mullana – Ambala, HR

August 2019 – July 2023
CGPA: 8.5
